
**Quick Start Guide for ATWILC3000
on SAMA5D4-EK Android platform**

AN-XXXX

Prerequisites

- **Hardware Prerequisites**
 - SAMA5D4EK board
 - Atmel WILC3000 evaluation board
 - Micro USB Cable (TypeA / MicroB)
 - USB to Serial Adaptor (for DBGU port)
- **Build Prerequisites**
 - Linux Host PC
 - Android Software Package

Introduction

The WILC3000 is a single chip IEEE 802.11 b/g/n RF, baseband, MAC, Bluetooth 4.0 and FM receiver optimized for low-power mobile applications. The WILC3000 utilizes highly optimized 802.11 – Bluetooth coexistence protocols. It provides multiple peripheral interfaces including UART, SPI, I2C and SDIO.

This quick start guide describes how to integrate the Atmel WILC3000 evaluation board via SDIO for Wi-Fi and USART for Bluetooth in SAMA5D4EK Android platform. The following links also are available to get more information on Atmel wireless drivers, Android/Linux kernel and prebuilt images.

- Atmel SAMA5D4-EK: <http://www.atmel.com/tools/sama5d4-ek.aspx>.

1. ATWILC3000 Linux Software Package

The latest WILC3000 is available on the [AtmelSmartConnect](#). Download the ATWILC3000 driver and firmware.

```
git clone https://github.com/atwilc3000/driver.git
git clone https://github.com/atwilc3000/firmware.git
```

For more information, visit the GitHub wiki pages: <https://github.com/atwilc3000/driver/wiki>

2. SAMA5D4EK Software Package

This chapter describes how to get the SAMA5D4EK Android SDK and build the images. The Android platform for AT91 is maintained at the [Android4Sam](#). See the following instructions to get the SDK and build images. This instruction is based on NAND flash boot mode.

2.1 Download Android source code

```
$ mkdir android4sam_v4.4_rc2
$ cd android4sam_v4.4_rc2
$ repo init -u git://github.com/Android4SAM/platform_sammanifest.git -b
  android4sam_v4.4_rc2
$ repo sync
```

2.2 Configure and build Android source code

```
$ . build/envsetup.sh
$ lunch sama5d4-eng
$ make
```

2.3 Generate Android image

```
$ mkubi_image -b sama5d4
```

Find **system_ubifs-SAMA5D4-ANDROID-4.4.2_r2.img** and **userdata_ubifs-SAMA5D4-ANDROID-4.4.2_r2.img** in the Android root directory if successful.

2.4 Download Kernel source code

```
$ git clone git://github.com/Android4SAM/linux-at91.git
$ cd linux-at91
$ git checkout -b linux-at91 Android4sam_v4.4_rc2
```

2.5 Configure and build

First copy the root directory in the Android source code directory.

```
$ cp -r <android-working-dir>/out/target/product/sama5d4/root ../<linux-working-dir>
```

Then, issue the following commands to build the kernel, modules and dtbs.

```
$ make mrproper
$ make ARCH=arm sama5_android_defconfig
$ make ARCH=arm CROSS_COMPILE=(path_to_cross-compiler/cross-compiler-prefix-) zImage
$ make ARCH=arm CROSS_COMPILE=(path_to_cross-compiler/cross-compiler-prefix-)
$ make ARCH=arm CROSS_COMPILE=(path_to_cross-compiler/cross-compiler-prefix-) dtbs
```

3. Flash images

Refer to [here](#) to flash prebuilt images and new images built with the Android and kernel source codes in the corresponding board.

3.1 Prebuilt images

The prebuilt images are provided in the [Android4Sam](#). Download the following demo package for NAND boot.

- SAMA5D4EK: Android-4.4.2_r2-sama5d4-nandboot-rc2.tgz

For SAMA5D4EK board, push PB4 (RESET) while pushing PB3. Then, the boards go to boot mode to flash the prebuilt image. Run the batch file, **sama5d4_nandflash.bat** in Windows. For Linux, run the script file like **sama5d4_nandflash.sh**.

3.2 Engineering images built with source codes

This section describes how to flash engineering images to the SAMA5D4EK board. If Android and kernel are successfully built, the following outputs are generated.

- <android-working-dir>/system_ubifs-SAMA5D4-ANDROID-4.4.2_r2.img
- <android-working-dir>/userdata_ubifs-SAMA5D4-ANDROID-4.4.2_r2.img
- <kernel-working-dir>/linux-at91/arch/arm/boot/zImage
- <kernel-working-dir>/linux-at91/arch/arm/boot/dts/sama5d4ek.dtb

All of outputs should be downloaded to the target board. Run the batch or script file as done with prebuilt image.

4. Bring up ATWILC3000

This section describes how to integrate the WILC3000 driver into the SAMA5D4EK Android platform. The patch file for the SAMA5D4EK is available in <https://github.com/atwilc3000/patch>. The following sections will briefly explain what to port the WILC3000 into the SAMA5D4EK Android platform.

4.1 Android: /device/atmel/sama5d4/BoardConfig.mk

The ATWILC3000 WLAN and Bluetooth are enabled in android with the following configuration in the BoardConfig.mk file.

```

BOARD_WIFI_VENDOR := atmel
ifeq ($(BOARD_WIFI_VENDOR), atmel)
    CONFIG_DRIVER_WEXT := y
    BOARD_WPA_SUPPLICANT_DRIVER := NL80211
    WPA_SUPPLICANT_VERSION := VER_0_8_X
    BOARD_WPA_SUPPLICANT_PRIVATE_LIB := lib_driver_cmd_nmc
    BOARD_HOSTAPD_DRIVER := NL80211
    BOARD_HOSTAPD_PRIVATE_LIB := lib_driver_cmd_nmc

    WIFI_FIRMWARE_LOADER := ""

    BOARD_WLAN_DEVICE := wilc3000

    WIFI_DRIVER_FW_PATH_STA := "AUTO"
    WIFI_DRIVER_FW_PATH_AP := "AUTO"
    WIFI_DRIVER_FW_PATH_P2P := "AUTO"

    BOARD_HAVE_BLUETOOTH := true
    BOARD_HAVE_BLUETOOTH_ATMEL := true
    SW_BOARD_HAVE_BLUETOOTH_NAME := wilc3000
endif

```

4.2 Android: /device/atmel/common/config/Android_Copy.mk

```

PREBUILD_FIRMWARE := wilc3000

ifeq ($(PREBUILD_FIRMWARE), wilc3000)
PRODUCT_COPY_FILES += \
    $(LOCAL_PATH)/wilc3000.ko:system/lib/modules/wilc3000.ko
endif

```

4.3 Android: /device/atmel/sama5d4/device.mk

The Bluetooth feature is enabled with the following configuration in the device.mk file.

```

PRODUCT_COPY_FILES += \
    frameworks/native/data/etc/android.hardware.bluetooth.xml:system/etc/permissions/android.hardware.bluetooth.xml \
    frameworks/native/data/etc/android.hardware.bluetooth_le.xml:system/etc/permissions/android.hardware.bluetooth_le.xml \

```

4.4 Android: /device/atmel/sama5d4/init.sama5-pda.rc

This file sets owner, group and also permission for the WLAN and Bluetooth like the following configuration.

```

insmod /system/lib/modules/wilc3000.ko
chown bluetooth net_bt_stack /dev/at_bt_pwr
#UART device
chmod 0660 /dev/ttyS2
chown bluetooth net_bt_stack /dev/ttyS2

```

The WPA supplicant is also configured with the following configuration for WLAN Station, AP and P2P mode.

```

service wpa_supplicant /system/bin/logwrapper /system/bin/wpa_supplicant -dd \
  -iwlan0 -Dnl80211 -c/data/misc/wifi/wpa_supplicant.conf \
  -O/data/misc/wifi/sockets \
  -e/data/misc/wifi/entropy.bin -g@android:wpa_wlan0
class main
socket wpa_wlan0 dgram 660 wifi wifi
disabled
oneshot

service p2p_supplicant /system/bin/logwrapper /system/bin/wpa_supplicant -dd \
  -ip2p0 -Dnl80211 -c/data/misc/wifi/p2p_supplicant.conf \
  -e/data/misc/wifi/entropy.bin -N \
  -iwlan0 -Dnl80211 -c/data/misc/wifi/wpa_supplicant.conf \
  -O/data/misc/wifi/sockets \
  -g@android:wpa_wlan0
class main
socket wpa_wlan0 dgram 660 wifi wifi
disabled
oneshot

```

4.5 Android: /hardware/atmel/sama5dx/Android.mk

```
modules := libagl gralloc hwcomposer audio liblights hardwareloader camera libbt wlan
```

4.6 Kernel: /arch/arm/boot/dts/sama5d4.dtsi

The SAMA5D4EK supports USART DMA with adding the followings in the USART2 section.

```

usart2: serial@fc008000 {
    compatible = "atmel,at91sam9260-usart";
    reg = <0xfc008000 0x100>;
    interrupts = <29 IRQ_TYPE_LEVEL_HIGH 5>;
    atmel,use-dma-rx;
    atmel,use-dma-tx;
    dmas = <&dma1
        (AT91_XDMAC_DT_MEM_IF(0) | AT91_XDMAC_DT_PER_IF(1))
        (AT91_XDMAC_DT_PERID(16) | AT91_XDMAC_DT_DWIDTH(0x0))>,
        <&dma1
        (AT91_XDMAC_DT_MEM_IF(0) | AT91_XDMAC_DT_PER_IF(1))
        (AT91_XDMAC_DT_PERID(17) | AT91_XDMAC_DT_DWIDTH(0x0))>;
    dma-names = "tx", "rx";
    pinctrl-names = "default";
    pinctrl-0 = <&pinctrl_usart2 &pinctrl_usart2_rts &pinctrl_usart2_cts>;
    status = "disabled";
};

```

The USART2 conflicts with ISI in ISI_VSYNC and HSYNC so it is disabled. However, the WILC3000 uses USART2 for RTS and CTS. So, the ISI should be disabled in the sama5d4ek.dts file.

4.7 Kernel:/arch/arm/boot/dts/sama5d4.dts

The USART2 should be enabled in this device tree for the WILC3000 Bluetooth while the ISI should be disabled.

```

isi: isi@f0008000 {
    status = "disabled"; /* For RTS and CTS, wilc3000 uses USART2 disabling ISI. */
};

```

The following statement should be included to enable USART2.

```
usart2: serial@fc008000 {  
    status = "okay";  
};
```

4.8 Kernel: /arch/arm/configs/sama5_android_defconfig

The followings should be added in the sama5_android_defconfig to support WILC3000 via SDIO and Bluetooth via USART interface.

```
CONFIG_ATMEL_SMARTCONNECT=y  
CONFIG_WILC3000=m  
CONFIG_WILC3000_SDIO=y  
# Bluetooth device drivers  
CONFIG_BT_HCIBTUSB=y  
CONFIG_BT_HCIBTSDIO=y  
CONFIG_BT_HCIUART=y  
CONFIG_BT_HCIUART_H4=y  
CONFIG_BT_HCIUART_BCSP=y  
CONFIG_BT_HCIUART_LL=y  
CONFIG_BT_HCIUART_3WIRE=y
```

4.9 Kernel: /drivers/net/wireless/Makefile, Kconfig

The followings should be added to build WILC3000 driver in kernel tree.

```
source "drivers/net/wireless/atmel/Kconfig"
```

```
obj-$(CONFIG_ATMEL_SMARTCONNECT) += atmel/
```

Create **atmel** directory in the wireless directory if not available. Then, copy the wilc3000 kernel driver into the **atmel** directory.

4.10 Kernel: wilc3000.ko

Building the kernel generates **wilc3000.ko** in the **{kernel-working-dir}/drivers/net/wireless/atmel/wilc3000**. It should be placed in the **{android-working-dir}/device/atmel/common/config/**. Then, build Android again to make new images. Make sure copy two android images also in the kernel root directory again and make new kernel zImage also. Flash four outputs as described in [section 4](#).

5. Hardware Consideration

This section shows how to connect the ATWILC3000 EVB to SAMA5D4EK for WiFi and Bluetooth. The ATWILC3000 should be connected to SAMA5D4EK via SDIO for WLAN and USART for Bluetooth.

5.1 Bluetooth

The HCI UART transport layer uses the following configurations:

- data length: 8 bits
- parity: no parity
- stop bit: 1stop bit
- flow control: RTS/CTS
- baud rate: vendor specific

- flow-off response time: vendor specific

The local RXD should be connected to the remote TXD and the local RTS should be connected to the remote CTS and vice versa.

For Bluetooth, the USART2 of SAMA5D4EK is connected to the ATWILC3000 EVB. However, USART2 conflicts with the ISI on the SAMA5D4EK board. So, it's required to disable the ISI and enable the USART2 in the device tree file for the ATWILC3000 demo. Refer to the [section 4.6](#) and [4.7](#). The following figure is I/O expansion, J15. The expansion, J15 has the TXD2 on pin 6, RXD2 on pin 14, RTS2 on pin 5 and CTS2 on pin 12.

Figure 1 SAMA5D4EK I/O Expansion

The TXD2 on the SAMA5D4EK should be connected to the RXD on the ATWILC3000 EVB, J216 pin18. In contrast, the RXD2 on the SAMA5D4EK should be connected to the TXD on the ATWILC3000 EVB, J216 pin19. The RTS2 on the SAMA5D4EK should be connected to the CTS on the ATWILC3000 EVB, J216 pin16 and the CTS2 should be connected to the RTS on the ATWILC3000 EVB, J216 pin24. Make sure open J227, J805 and J901 on ATWILC3000 EVB before running the Bluetooth.

Figure 2 ATWILC3000 EVB J216

5.2 WiFi

For the WLAN, the MCI1 on the SAMA5D4EK should be connected to the SDIO_J1 on the ATWILC3000 EVB. The following figure is I/O expansion, J19 on SAMA5D4EK. The expansion, J19 has the DAT0 to DAT3 on pin 53 to 56 respectively, SD_CMD on pin 52, SD_CLK on pin 50, GND on pin 51 and VCC3V3 on pin 21.

For the card detection, MC1_CD on pin 38 should be connected to GND on pin 31.

Figure 3 SAMA5D4EK IO Expansion Socket J19

Table 4-20. IO Expansion Socket J19 Signal Descriptions

Signal	Pin Number	Signal	Pin Number	Signal	Pin Number
PB0	1	VCC3V3	21	PE9	41
PB2	2	VCC3V3	22	PE10	42
PB6	3	PE31	23	PE11	43
PB7	4	PA24	24	PE12	44
PB8	5	PA25	25	PE13	45
PB9	6	PC4	26	PE14	46
PB10	7	PD8	27	PE15	47
PB12	8	PD30	28	PE16	48
PB13	9	PD31	29	PE17	49
PB15	10	-	30	PE18	50
GND	11	GND	31	GND	51
PB16	12	PE0	32	PE19	52
PB17	13	PE1	33	PE20	53
PB21	14	PE2	34	PE21	54
PB22	15	PE3	35	PE22	55
PB24	16	PE4	36	PE23	56
PB25	17	PE5	37	PE24	57
PB27	18	PE6	38	PE25	58
PB28	19	PE7	39	PE26	59
PB31	20	PE8	40	PE27	60

The following figure is the SDIO_J1 pin on the ATWILC3000. The SD_DAT0 to SD_DATA3 should be connected to support SDIO 4-bit mode. In addition, SD_CMD, SD_CLK, 3V3 and GND should be connected to the SAMA5D4EK board.

Figure 4 ATWILC3000 SDIO_J1 Pin

The following is real picture showing how to connect ATWILC3000 EVB to SAMA5D4EK for SDIO interface.

Figure 5 ATWILC3000 to SAMA5D4EK via SDIO

6. Conclusion

This Quick Start Guide described how to integrate the Atmel WILC3000 Combo driver in the Android platform with SAMA5D4-EK board.
